- Native Ruby + Docker DBs
- Serving .localhost
- Drop system tests
- Testing with local CI
- Scripted setup
- Deploy from local

You become a man's Friend without knowing or caring whether he is married or single or how he earns his living. What have all these ‘unconcerning things, matters of fact’ to do with the real question,

Do you see the same truth?

— C.S. Lewis, *The Four Loves*

> Part of the problem seems to be that nobody these days is content to merely put their dent in the universe. No, they have to **own the universe**. It’s not enough to be in the market, they have to **dominate it**. It’s not enough to serve customers, they have to **capture them**.
>
> — Me, A Decade Ago, *RECONSIDER*

60,000 RPS

(on Kevin's laptop)

Bootstrap Budget

Time	Task
5m	Install OS
3m	Setup app
2m	Run Local CI
3m	Deploy code

Single dev in 1999	50-strong team in 2025
Deploys in 5s via SFTP	Deploys in 15m via CI/CD
From a Pentium III	From infinite cloud CPUs

Are YOU suffering from server-phobia?

Are YOU suffering from server-phobia?

Don’t worry. There’s a cure.

Are YOU suffering from server-phobia?

Don’t worry. There’s a cure.

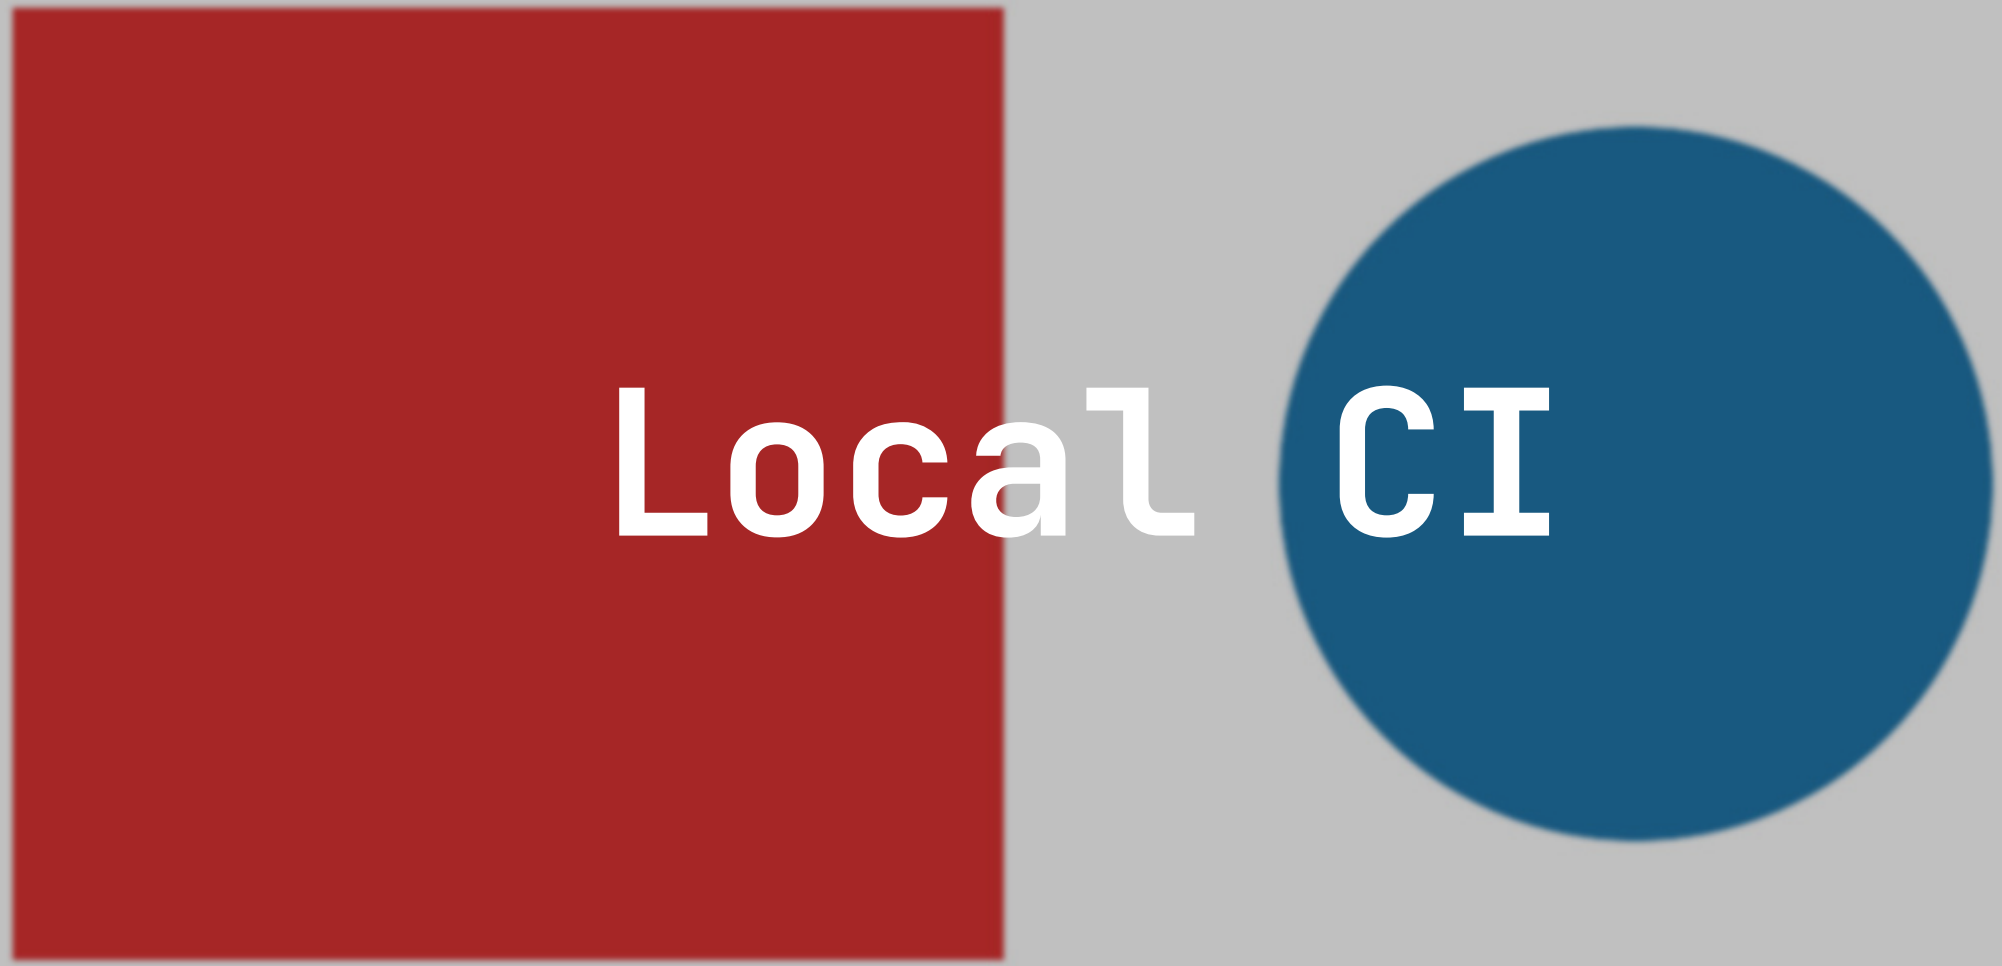

It’s called **LINUX**.

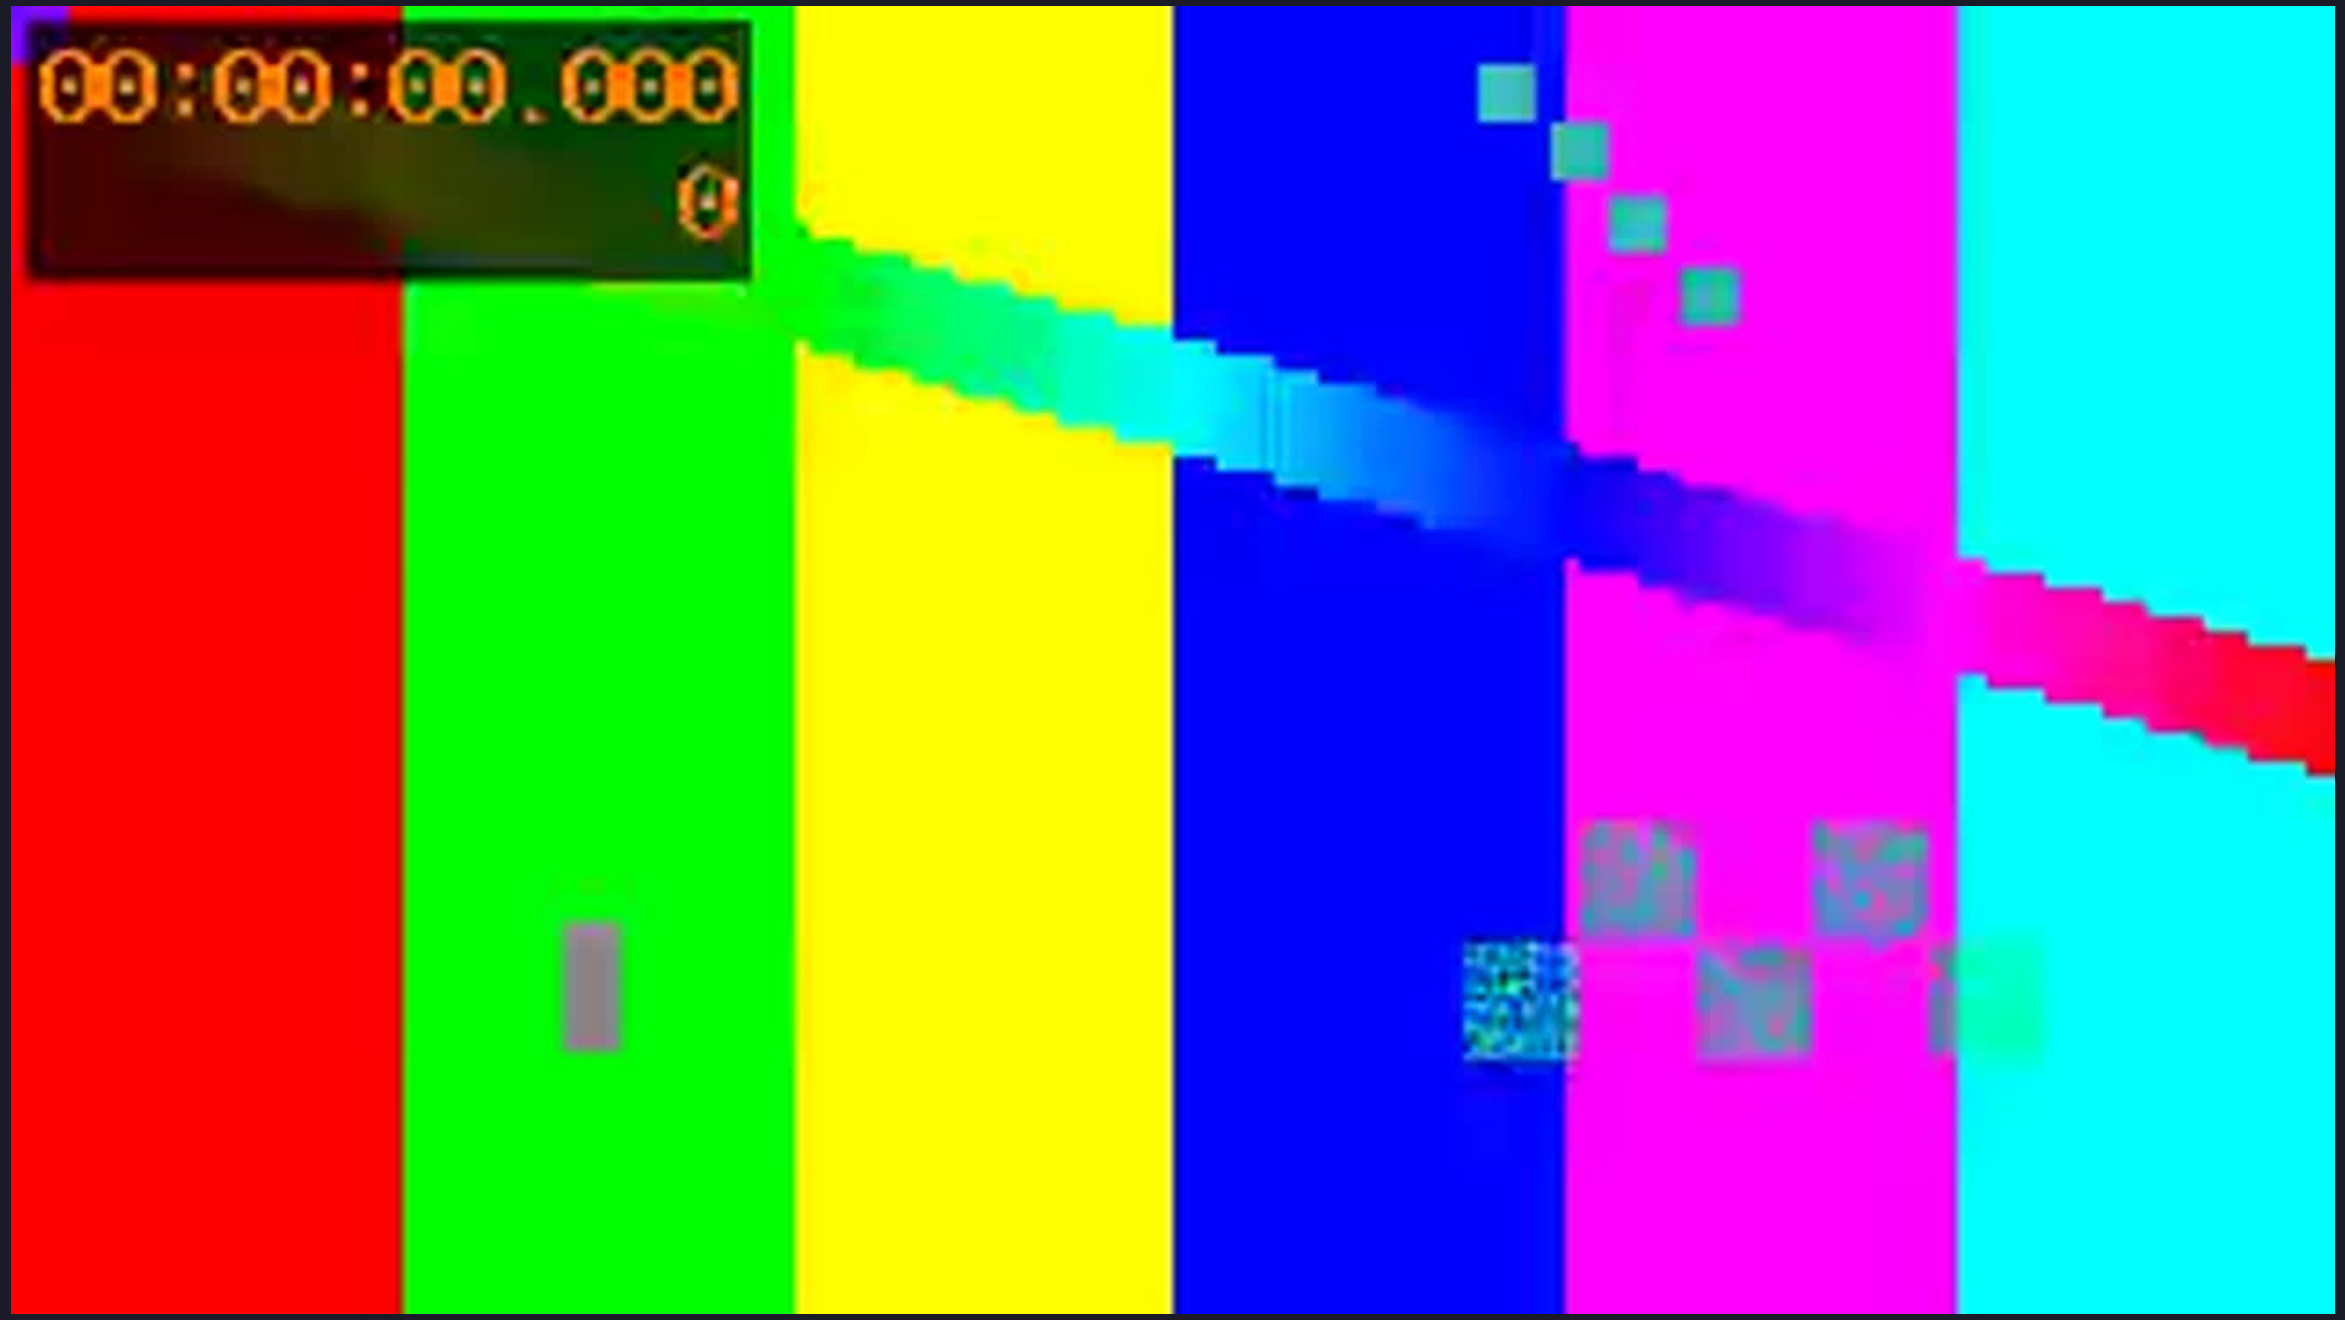

Markdown responses

```
class PagesController < ActionController::Base
  def show
    @page = Page.find(params[:id])

    respond_to do |format|
      format.html
      format.md { render markdown: @page }
    end
  end
end
```
